

The SESK Party Game

STUFF EVERY FISH OWNER SHOULD KNOW

How to play (30 seconds)

1. The reader reads a card and its three answers out loud.
2. Everyone says "One, two, three, Goldilocks!" and holds up 1, 2, or 3 fingers.
3. The reader flips the card and reads the answer and the Why.
4. Everyone who was right takes a point.
5. The reader reads the joke with a straight face. Anyone laughs or groans? The reader takes a point. Nobody got it right? The reader takes a point.
6. Pass the deck left. Most points when the points run out wins.

What you need

These cards and the point tokens on the last two pages. No tokens? Use coins, buttons, pebbles, or marshmallows. 3 to 10 players, ages 8 and up.

Expert rule: Bet It

Before the reader flips the card, you may put one of your points on your answer. Right: take your normal point plus one extra. Wrong: your bet goes back to the pile. That's it.

Printing

Print single-sided, on cardstock if you have it. Cut on the dashed lines. Each card is a 3.5 x 5 inch index card. The answer half is upside down on purpose, so the table can't peek. Cards 1 to 50 of 121. More cards and the free daily online game at sesk.info. Built 2026-10-12.

FISH & AQUARIUMS

How long can a well-cared-for goldfish live?

- A** 30 years or more
- B** About 1 year
- C** No more than 5 years

FLIP FOR THE ANSWER

#7933

SESK.INFO

STRAIGHT FACE
What do you call a big fish that makes you an offer you can't refuse? The Codfather.

A 30 years or more
WHY Goldfish can live 30 years or more, according to the Southern Regional Aquaculture Center. A child getting one may still need an adult plan for its care decades later.

FISH & AQUARIUMS

How large can a goldfish grow?

- A** Nearly 23 inches
- B** Never more than 2 inches
- C** Up to about 4 feet

FLIP FOR THE ANSWER

#7934

SESK.INFO

STRAIGHT FACE
What do you call a fish that wears a bowtie? Softshated.

A Nearly 23 inches
WHY The Southern Regional Aquaculture Center says goldfish can grow nearly 23 inches long. Plan the aquarium for the fish's adult size, not its size at the store.

FISH & AQUARIUMS

Does a small tank set a healthy maximum size for a goldfish?

- A** Yes, tank walls safely limit growth
- B** No, larger fish need more room
- C** Yes, any tank fits an adult goldfish

FLIP FOR THE ANSWER

#7935

SESK.INFO

STRAIGHT FACE
Why did the goldfish ask for a bigger tank? It wanted to grow on the job.

B No, larger fish need more room
WHY Goldfish do not neatly grow to fit a tank. Rutgers Extension says larger fish need larger tanks to reach full size, and SRAC says goldfish can grow nearly 23 inches. Plan for adult size.

FISH & AQUARIUMS

Should a goldfish be treated as a disposable pet?

- A** No, it needs committed care
- B** Yes, if it was inexpensive
- C** Yes, if it came from a fair

FLIP FOR THE ANSWER

#7936

SESK.INFO

STRAIGHT FACE
Why do goldfish love group projects? They're great at schoolwork.

A No, it needs committed care
WHY UFF/FAAS says aquarium fish should not be treated as disposable items. Goldfish can live 30 years or more, so the family needs a long-term care plan before bringing one home.

FISH & AQUARIUMS

Why can goldfish be a poor match for many tropical fish?

- A** Goldfish need saltwater
- B** Their temperature needs can differ
- C** Goldfish only eat live food

FLIP FOR THE ANSWER

#7937

SESK.INFO

STRAIGHT FACE
What did the ocean say to the fish? Nothing, it just waved.

B **WHY** Their temperature needs can differ
SRAC gives goldfish an optimal range of about 65°F to 75°F, while Merck says tropical fish need water near 77°F. Research every species before mixing fish because their safe ranges may not match.

FISH & AQUARIUMS

Tropical aquarium fish need water kept near what temperature?

- A** About 60°F (16°C)
- B** About 95°F (35°C)
- C** About 77°F (25°C)

FLIP FOR THE ANSWER

#7938

SESK.INFO

STRAIGHT FACE
Why did the tropical fish love the heater? It was a real fan of warm welcomes.

C **WHY** About 77°F (25°C)
Tropical fish come from warm waters and need their tank kept near 77°F. Most homes are cooler than that, so tropical tanks need a heater. Fish from cooler places do better at lower temperatures.

FISH & AQUARIUMS

Does a goldfish tank usually need a heater?

- A** No, room temperature is fine
- B** Yes, always set to 85°F
- C** Only if the fish is old

FLIP FOR THE ANSWER

#7939

SESK.INFO

STRAIGHT FACE
What do you call a fish with two knees? A two-knee fish.

A **WHY** No, room temperature is fine
Goldfish and other temperate or coldwater fish do fine in room-temperature water. Tropical fish are different: they need a heater. Know which kind you are buying before you buy equipment.

FISH & AQUARIUMS

What does a betta need for long-term health?

- A** Plant roots and no other food
- B** Good water, nutrition and disease prevention
- C** Cold water and strong currents

FLIP FOR THE ANSWER

#7940

SESK.INFO

STRAIGHT FACE
What kind of fish only swims at night? A starfish.

B **WHY** Good water, nutrition and disease prevention
UF/IFAS says good water quality, nutrition and disease prevention promote betta health and longevity. A hardy fish still needs regular care, and a fish veterinarian can help diagnose disease.

FISH & AQUARIUMS

Can an 8-year-old be solely responsible for an aquarium?

- A** Yes, after one day of practice
- B** Yes, if the tank is small
- C** No, an adult must share responsibility

FLIP FOR THE ANSWER

#7941

SESK.INFO

STRAIGHT FACE
Why did the young aquarist ask for help? The job was too fin-volved.

C No, an adult must share responsibility
WHY Aquarium care includes daily feeding and equipment checks plus regular testing and cleaning. U/F/FAS pairs youth with an adult partner, so an adult should oversee setup, electricity, water quality and backup care.

FISH & AQUARIUMS

Does a betta fish need a heater in most homes?

- A** Yes, bettas need 76 to 81°F
- B** No, room temperature is fine
- C** Only in summer

FLIP FOR THE ANSWER

#7942

SESK.INFO

STRAIGHT FACE
What do fish take to stay healthy? Vitamin in sea.

A Yes, bettas need 76 to 81°F
WHY Bettas are tropical fish. Their water should stay between 76°F and 81°F, and most homes are cooler, so an in-tank heater and a thermometer are needed.

FISH & AQUARIUMS

What size home does a University of Illinois vet recommend for one betta?

- A** A 1-cup vase
- B** A 5-gallon tank or larger
- C** A 1-quart bowl

FLIP FOR THE ANSWER

#7943

SESK.INFO

STRAIGHT FACE
What's a fish's favorite instrument? The bass guitar.

B A 5-gallon tank or larger
WHY A zoo-medicine vet at the University of Illinois says a betta should ideally live in a 5-gallon tank or larger. More water lets it swim normally and slows the buildup of toxins.

FISH & AQUARIUMS

What is the main problem with keeping a betta in a small bowl, according to a vet?

- A** The glass makes the water salty
- B** Bowls are too bright at night
- C** Too small for normal swimming and hiding

FLIP FOR THE ANSWER

#7944

SESK.INFO

STRAIGHT FACE
Why did the betta turn down the tiny bowl? It said the place had no room to fin-ish anything.

C Too small for normal swimming and hiding
WHY Bettas are often sold and kept in small bowls, but a zoo-medicine vet says those bowls are too small for normal swimming and hiding. If a small container is used, it needs very frequent water changes.

FISH & AQUARIUMS

What kind of filter is best for a betta's tank?

- A** A low-flow, gentle filter
- B** A strong, fast filter
- C** No water movement ever, no filter

FLIP FOR THE ANSWER

#7945

SESK.INFO

STRAIGHT FACE
Why did the fish blush? Because it saw the sea weed.

A **WHY** A low-flow, gentle filter
Bettas have long, delicate fins and prefer calm water. Vets recommend a low-flow filter so the suction does not injure fins, and university researchers found strong flow stresses bettas.

FISH & AQUARIUMS

Can two male bettas share a tank?

- A** Yes, males need company
- B** No, males can fight and injure each other
- C** Yes, if they are the same color

FLIP FOR THE ANSWER

#7946

SESK.INFO

STRAIGHT FACE
Why did the fish cross the ocean? To get to the other tide.

B **WHY** No, males can fight and injure each other
Male bettas are highly aggressive toward other males. UFF/FA5 says males are separated at 3 to 4 months old to avoid damage, while females are raised in communal tanks.

FISH & AQUARIUMS

Can a betta live by nibbling plant roots in a vase?

- A** Yes, roots are all it needs
- B** Yes, if the plant is big
- C** No, bettas eat insects and need fish food

FLIP FOR THE ANSWER

#7947

SESK.INFO

STRAIGHT FACE
What did the fish say when it heard a good joke? You've got to be squidding me.

C **WHY** No, bettas eat insects and need fish food
Some sellers claim a betta can live off plant roots in a vase. A vet says that is not true. Bettas are carnivores that eat insects and larvae, so they need a balanced pellet or flake food.

FISH & AQUARIUMS

How can bettas breathe air at the water's surface?

- A** A labyrinth organ above the gills
- B** They have small lungs
- C** They absorb air through their fins

FLIP FOR THE ANSWER

#7948

SESK.INFO

STRAIGHT FACE
What did one fish say to the other in the tank? Do you know how to drive this thing?

A **WHY** A labyrinth organ above the gills
Bettas are labyrinth fish. A folded organ above the gills lets them gulp air at the surface, which helps them survive warm, low-oxygen puddles. It also means they need easy access to the surface.

FISH & AQUARIUMS

If you want to add snails or shrimp to a betta's tank, what has to change?

- A** Nothing, they fit anywhere
- B** A bigger tank and filtration
- C** Feed the betta less

FLIP FOR THE ANSWER

#7949

SESK.INFO

STRAIGHT FACE
What does a fish say when it's surprised? Holy mackerell!

B A bigger tank and filtration
WHY A vet says snails, ghost shrimp, African dwarf frogs and some fish can live with a betta. Each extra animal adds waste, so the tank and filter must get bigger to keep everyone healthy.

FISH & AQUARIUMS

A common freshwater stocking guideline is 1 inch of fish for every how much water surface?

- A** 1 square inch
- B** 100 square inches
- C** 12 square inches

FLIP FOR THE ANSWER

#7950

SESK.INFO

STRAIGHT FACE
Why did the fish get a job? It wanted to make some sand dollars.

C 12 square inches
WHY In freshwater tanks, the number of fish depends on surface area. Merck suggests about 1 inch of fish per 12 square inches of surface. Count adult size, not the size at the store.

FISH & AQUARIUMS

Compared with a warm tropical tank, should a cold goldfish tank hold more fish or fewer?

- A** Fewer, bacteria work less in cold
- B** More, cold water holds more fish
- C** Exactly the same number

FLIP FOR THE ANSWER

#7951

SESK.INFO

STRAIGHT FACE
Why do fish always know the news? They follow the current.

A Fewer, bacteria work less in cold
WHY The helpful bacteria that clean up fish waste work more slowly in cold water. So coldwater tanks, like goldfish tanks and ponds, should be stocked more lightly.

FISH & AQUARIUMS

Why does a saltwater tank hold fewer fish than a freshwater tank of the same size?

- A** Saltwater fish are always bigger
- B** Saltwater holds less dissolved oxygen
- C** Salt makes fish lazy

FLIP FOR THE ANSWER

#7952

SESK.INFO

STRAIGHT FACE
Why did the saltwater fish need extra space? It didn't want to be in a pickle.

B Saltwater holds less dissolved oxygen
WHY Merck's saltwater guideline is about 1 inch of fish per 5 gallons, far fewer than freshwater. Saltwater carries less dissolved oxygen, and saltwater fish are more sensitive to crowding.

FISH & AQUARIUMS

About how much does 1 gallon of aquarium water weigh?

- A** About 1 pound
- B** About 25 pounds
- C** About 8.3 pounds

FLIP FOR THE ANSWER

#7953

SESK.INFO

STRAIGHT FACE
Why was the fish so easy to weigh? It had its own scales.

C About 8.3 pounds
WHY Water weighs about 8.3 pounds per gallon, so even a small aquarium is very heavy. The floor and stand must be strong, level and stable before you fill it.

FISH & AQUARIUMS

Where should you NOT put a fish tank?

- A** In direct sunlight
- B** Near an electrical outlet
- C** Where you can reach it to clean

FLIP FOR THE ANSWER

#7954

SESK.INFO

STRAIGHT FACE
What's a fish's favorite game show? Name that tuna.

A In direct sunlight
WHY Keep tanks out of direct sunlight. Sun feeds algae and can warm the water, and warm water holds less oxygen. Pick a spot near outlets that is easy to reach for feeding and cleaning.

FISH & AQUARIUMS

Is a small bowl less work than a bigger filtered aquarium?

- A** Yes, bowls never need cleaning
- B** No, they need more water changes
- C** Yes, if you use bottled water

FLIP FOR THE ANSWER

#7955

SESK.INFO

STRAIGHT FACE
What's a goldfish's favorite TV show? Whale of Fortune.

B No, they need more water changes
WHY Small bowls and betta tanks may skip the filter or heater, but that means more frequent, larger water changes, perhaps half the water every week. Small water goes bad faster.

FISH & AQUARIUMS

Which aquarium takes the most maintenance?

- A** A goldfish in a filtered tank
- B** A coldwater pond fish setup
- C** A saltwater reef tank with corals

FLIP FOR THE ANSWER

#7956

SESK.INFO

STRAIGHT FACE
Where do fish sleep? In a riverbed.

C A saltwater reef tank with corals
WHY A saltwater reef tank with live corals needs much more upkeep than a goldfish setup. CDC also says saltwater tanks need more maintenance than freshwater tanks. Choose a setup that fits your available time.

FISH & AQUARIUMS

Is buying the fish the only aquarium cost?

- A** Yes, water and care are always free
- B** Only saltwater fish need equipment
- C** No, supplies and ongoing care add costs

FLIP FOR THE ANSWER

#7957

SESK.INFO

STRAIGHT FACE
Which fish costs the most? A goldfish.

C No, supplies and ongoing care add costs
WHY The fish is only one part of the commitment. CDC says some species require more extensive care and supplies. Budget for the tank, filtration, temperature control when needed, water tests, food, maintenance supplies and veterinary help.

FISH & AQUARIUMS

Which aquarium chore is on the DAILY list?

- A** Replace the filter carbon
- B** Check fish, temperature and equipment
- C** Check the lights' wiring

FLIP FOR THE ANSWER

#7958

SESK.INFO

STRAIGHT FACE
How do fish get to school? By octopus.

B Check fish, temperature and equipment
WHY Every day: look at the fish, check the water temperature and equipment, feed, and remove uneaten food. Fish cannot ask for help, so a few minutes a day matters.

FISH & AQUARIUMS

Which of these is a WEEKLY aquarium chore?

- A** Service the air pump
- B** Check the lighting
- C** Top off evaporated water

FLIP FOR THE ANSWER

#7959

SESK.INFO

STRAIGHT FACE
Why do fish make good party planners? They know how to make a splash.

C Top off evaporated water
WHY Each week: add water to replace what evaporated, remove algae from the glass, and clean the cover. A tank is a small, steady chore list, not a one-time setup.

FISH & AQUARIUMS

What should a family do BEFORE buying any fish?

- A** Research the species' needs first
- B** Buy the brightest fish they see
- C** Pick fish, then buy any tank

FLIP FOR THE ANSWER

#7960

SESK.INFO

STRAIGHT FACE
What did the fish say to the encyclopedia? Let me just skim you first.

A Research the species' needs first
WHY Fish species differ in water temperature, pH and temper, and some will attack or eat tankmates. Vets and the CDC both say to research which fish suit your family and tank before buying.

FISH & AQUARIUMS

What should happen before fish enter a new aquarium?

- A** Add fish when the water looks clear
- B** Set up the tank and verify water quality
- C** Add every planned fish at once

FLIP FOR THE ANSWER

#7961

SESK.INFO

STRAIGHT FACE
What's a fish's favorite moving day? Whenever the water is ready.

B Set up the tank and verify water quality
WHY Clear water does not prove safe chemistry. Merck says beneficial bacteria usually take 4 to 6 weeks to develop, and too many fish can overwhelm them. Test the water and follow a species-specific startup plan.

FISH & AQUARIUMS

When choosing a fish at the store, which sign means it is probably healthy?

- A** Cloudy eyes
- B** Ragged, bloody fins
- C** Bright, clear eyes

FLIP FOR THE ANSWER

#7962

SESK.INFO

STRAIGHT FACE
What did the fish say at the pet store? Pick me, I'm a real keeper!

C Bright, clear eyes
WHY Healthy fish have smooth scales and fins, bright eyes, and swim normally. Cloudy eyes, ragged fins or circling and drifting are warning signs. The other fish in that tank should look healthy too.

FISH & AQUARIUMS

Per the CDC, which kids should NOT clean or handle aquarium items?

- A** Children younger than 5
- B** Children younger than 12
- C** No limit, any child

FLIP FOR THE ANSWER

#7963

SESK.INFO

STRAIGHT FACE
Why did the little kid wave at the fish tank? Because the fish waved first.

A Children younger than 5
WHY The CDC says children younger than 5 should not clean or handle aquarium items, because fish and tank water can carry germs. Older kids can help, with an adult, and everyone washes hands after.

FISH & AQUARIUMS

Before changing water in the tank, what should you do with the filter, light and air pump?

- A** Leave them running
- B** Unplug them
- C** Move them into the sink

FLIP FOR THE ANSWER

#7964

SESK.INFO

STRAIGHT FACE
Why did the fish tank light stay calm? It knew when to switch off.

B Unplug them
WHY Water and electricity do not mix. A kids' goldfish guide says to unplug the filter, light and air pump before exchanging water, and only plug things in with dry hands. Kids should do this with an adult.

FISH & AQUARIUMS

What does a pet fish depend on you for?

- A** Only food, the tank cleans itself
- B** Nothing, fish are wild animals
- C** All its food and living conditions

FLIP FOR THE ANSWER

#7965

SESK.INFO

STRAIGHT FACE
What do you call a fish that won't share its food?
Shellfish.

C **All its food and living conditions**
WHY A tank is a closed world. Purdue's 4-H guide says your fish depends completely on you for food and living conditions. Regular care keeps those conditions safe.

FISH & AQUARIUMS

Why does water temperature matter so much to a fish's body?

- A** Fish are cold-blooded
- B** Fish are warm-blooded like us
- C** Fish sweat to cool off

FLIP FOR THE ANSWER

#7966

SESK.INFO

STRAIGHT FACE
What did the fish say when it saw the thermometer? Uh oh, I'm in hot water now.

A **Fish are cold-blooded**
WHY Fish are ectothermic, or cold-blooded. They do not hold a steady body temperature, so the water sets it. That is why the right temperature for each species is so important.

FISH & AQUARIUMS

Why put a cover on a fish tank?

- A** It stops fish from sleeping
- B** It keeps fish from jumping out
- C** It makes the water saltier

FLIP FOR THE ANSWER

#7967

SESK.INFO

STRAIGHT FACE
Why did the cat sit by the fish tank? It was hoping for a little fin-tertainment

B **It keeps fish from jumping out**
WHY Fish can jump from uncovered tanks. Rutgers says a cover should not completely seal the tank because air exchange is important for fish respiration and water quality.

FISH & AQUARIUMS

What do beneficial bacteria turn ammonia into first?

- A** Nitrite
- B** Nitrate
- C** Oxygen

FLIP FOR THE ANSWER

#7968

SESK.INFO

WHY Nitrifying bacteria oxidize ammonia to nitrite. Another group later turns nitrite into nitrate.

A **Nitrite**

FISH & AQUARIUMS

What do nitrifying bacteria turn nitrite into?

- A** Ammonia
- B** Nitrate
- C** Nitrogen gas

FLIP FOR THE ANSWER

#7969

SESK.INFO

STRAIGHT FACE
What fish is best at playing cards? A card shark.

B Nitrate
WHY The second group of nitrifying bacteria oxidizes nitrite to nitrate. Nitrate is far less toxic than ammonia or nitrite.

FISH & AQUARIUMS

Which nitrogen waste is the least toxic to fish?

- A** Ammonia
- B** Nitrite
- C** Nitrate

FLIP FOR THE ANSWER

#7970

SESK.INFO

STRAIGHT FACE
Why was the fish always late? It got stuck in a school.

C Nitrate
WHY Ammonia and nitrite are highly toxic. Nitrate is much less toxic, though high levels still stress fish.

FISH & AQUARIUMS

Which form of ammonia is far more toxic to fish?

- A** Un-ionized ammonia (NH₃)
- B** Ionized ammonium (NH₄⁺)
- C** Both are equally toxic

FLIP FOR THE ANSWER

#7971

SESK.INFO

STRAIGHT FACE
Why did the fish get bad grades? Because it was below sea level.

A Un-ionized ammonia (NH₃)
WHY Un-ionized ammonia is about 100 times more toxic than ammonium. Its share of the total rises as pH and temperature rise.

FISH & AQUARIUMS

Why is nitrite dangerous to fish?

- A** It makes the water too acidic
- B** It stops the blood from carrying oxygen
- C** It clouds the water so fish cannot see

FLIP FOR THE ANSWER

#7972

SESK.INFO

STRAIGHT FACE
What do you call a fish that won't share? Shellfish.

B It stops the blood from carrying oxygen
WHY Nitrite turns hemoglobin into methemoglobin, which cannot deliver oxygen. The gills can turn chocolate brown, and fish gasp at the surface.

FISH & AQUARIUMS

What does cycling a new aquarium mean?

- A** Running the heater
- B** Changing water daily
- C** Growing nitrifying bacteria

FLIP FOR THE ANSWER

#7973

SESK.INFO

STRAIGHT FACE
What's a fish's favorite song? Salmon Chanted Evening.

C **Growing nitrifying bacteria**
WHY Cycling establishes a biological filter. These bacteria convert toxic ammonia and nitrite into safer nitrate.

FISH & AQUARIUMS

A fishless cycle adds what instead of fish?

- A** An ammonia source
- B** Vitamin drops
- C** Aquarium salt

FLIP FOR THE ANSWER

#7974

SESK.INFO

STRAIGHT FACE
Why are goldfish orange? The water makes them rusty.

A **An ammonia source**
WHY Fishless cycling feeds the nitrifying bacteria without putting fish in toxic water. You test until ammonia and nitrite both read zero.

FISH & AQUARIUMS

What does fish-in cycling require from the owner?

- A** No water changes
- B** Frequent testing and small water changes
- C** Feeding more

FLIP FOR THE ANSWER

#7975

SESK.INFO

STRAIGHT FACE
What is a fish's favorite instrument? The scales.

B **Frequent testing and small water changes**
WHY Fish-in cycling exposes fish to some ammonia and nitrite. The owner must dilute these toxins with frequent small water changes.

FISH & AQUARIUMS

What causes new tank syndrome?

- A** Too much gravel
- B** Cold water
- C** Ammonia and nitrite spikes

FLIP FOR THE ANSWER

#7976

SESK.INFO

STRAIGHT FACE
Why are fish so easy to weigh? They come with their own scales.

C **Ammonia and nitrite spikes**
WHY A new filter has not grown enough nitrifying bacteria. Waste quickly builds ammonia and nitrite, which can kill fish.

FISH & AQUARIUMS

Which water tests matter most during a new tank cycle?

- A** Ammonia and nitrite
- B** Only temperature
- C** Only pH

FLIP FOR THE ANSWER

#7977

SESK.INFO

STRAIGHT FACE
What sea creature tells fortunes? A clamvovant.

A Ammonia and nitrite
WHY Ammonia and nitrite reveal whether cycling bacteria are established. Nitrate is useful to watch later.

FISH & AQUARIUMS

What do most aquarium ammonia test kits actually measure?

- A** Only the toxic un-ionized ammonia
- B** Total ammonia, both forms together
- C** Only nitrate

FLIP FOR THE ANSWER

#7978

SESK.INFO

B Total ammonia, both forms together
WHY Kits read total ammonia nitrogen (TAN). To know how much is the toxic form, you also need the pH and temperature.

FISH & AQUARIUMS

How is nitrate removed or reduced in most home aquariums?

- A** Adding more food
- B** Turning off the filter
- C** Regular partial water changes

FLIP FOR THE ANSWER

#7979

SESK.INFO

C Regular partial water changes
WHY Aquarium filters usually do not remove nitrate. Diluting it with clean water is the main control.

FISH & AQUARIUMS

About how much tank water is a common weekly partial water change?

- A** About 10 to 20 percent
- B** All of it
- C** None, just top it off

FLIP FOR THE ANSWER

#7980

SESK.INFO

STRAIGHT FACE
Why did the fish start a band? It already had the scales.

A About 10 to 20 percent
WHY A partial change removes waste without a big swing in water conditions. Small bowls without filters need changes more often.

FISH & AQUARIUMS

Why should you avoid replacing all the tank water at once?

- A** New water holds too much oxygen
- B** Sudden changes can shock the fish
- C** It removes nitrate fish need

FLIP FOR THE ANSWER

#7981

SESK.INFO

STRAIGHT FACE
What is a fish's favorite movie? The Godfather.

B **WHY** Sudden changes can shock the fish
Changing all the water at once can swing temperature and pH quickly. Fish handle small, gradual changes much better.

FISH & AQUARIUMS

Why do you add dechlorinator to tap water?

- A** It adds ammonia
- B** It makes water colder
- C** It removes chlorine and chloramines

FLIP FOR THE ANSWER

#7982

SESK.INFO

STRAIGHT FACE
How do fish get online? With a fin-ternet connection.

C **WHY** It removes chlorine and chloramines
Municipal tap water often contains chlorine or chloramines to control germs. Dechlorinator makes it safe for fish and filter bacteria.
